

AN INTRODUCTION TO LAMBPLAN

Are you a terminal or maternal ram breeder interested in learning how information from LAMBPLAN can be applied to your breeding program? If so, Sheep Genetics extends an invitation to you to attend an Introduction to LAMBPLAN workshop in your region.

The informal, hands on workshop provides an introduction to:

- Setting breeding objectives that will make you more money, including how to balance a range of traits in a breeding objective.
- Australian Sheep Breeding Values (ASBVs) and Flock Breeding Values (FBVs) - What are they and how are they used to improve carcase, maternal, disease resistance and wool traits?
- What reports are available from Sheep Genetics and how to read ASBV accuracies.
- The role of indexes in sheep selection.

Workshops will be run throughout Australia from winter 2007. Please contact Alanna Roberts at Sheep Genetics to have a workshop held in your region.
